CL-1002
Programming Fundamentals
Lab # 5

Objectives:

1. Exhibit the understanding of pseudocode of repetitive problems.
2. Exhibit the understanding of drawing Flow Charts of repetitive problems.
3. Understanding cout<< statement in C programming.

Note: Carefully read the following instructions (*Each instruction contains a weightage*)

1. First think about statement problems and then write your logic on Paper.
2. Write pseudocode/Flowchart in handwritten form on **Paper using Pen.**
3. Write **Your Name** and **Roll No** on your Paper/Sheet's all pages.
4. Do not copy from any source otherwise you will be penalized with negative marks.
5. Complete your lab **within given Time Slot**.

Write C++ Code without using "using namespace std"

1. **Write a C++ program that Inputs 3 numbers from user and find their average.**
2. **Write a C++ program that displays the value of π then input the radius of a circle from the user and displays its area (Note : You will have to declare pi as a variable and assign it value of 22/7.** and **).**
3. **Write a C++ program to calculate Area and Perimeter of a square.**
4. **Write a C++ program to calculate the interest of the bank deposit (Formula is : amount*years*rate/100).**
5. **Write a C++ program to swap values of 2 variable by using a third variable.**
6. **Write a C++ program to that calculates product of 3 integers given by user.**
7. **Write a C++ program to Print the table of entered number upto 10 without using loop.**
8. **Write a C++ to swap 2 variables without using a third variable.**

Arithmetic Expressions

1. **2 – 3 * (4 + 5) + 3 *5**
2. **2 * 3 + 3 * (2 – 1 * (8 + 7 - 3))**
3. **2 * (4 + 6) - 3 / (2 - 1)**
4. **(8 - 3) * 2 + 9 / (6 - 2)**
5. **(4 + 7) * (1 – 3 + 4 * (10 / 2 * 3 - 5)) + (3^2 - 5) % 2**

Best of Luck ☺

You need to done with your exercise within given time.
