

CL-1002

Programming Fundamentals

Lab # 4

Objectives:

1. • Exhibit the understanding of pseudocode of repetitive problems.
2. • Exhibit the understanding of drawing Flow Charts of repetitive problems.

Note: Carefully read the following instructions (*Each instruction contains a weightage*)

1. First think about statement problems and then write your logic on Paper.
2. Write pseudocode/Flowchart in handwritten form on **Paper using Pen**.
3. Write **Your Name** and **Roll No** on your Paper/Sheet's all pages.
4. **Do not copy from any source otherwise you will be penalized with negative marks.**
5. Complete your lab **within given Time Slot**.

Problem: Write pseudocode of decision-based problems.

Repetition Problems

1. Write pseudocode to print your name 15 times using loop. (10 minutes) **5 marks**
2. Write pseudocode to print all Even numbers between the range of positive integers 10-100. (20 minutes) **10 marks**
3. Write pseudocode to print first 'n' Even numbers where 'n' is entered by the user. (20 minutes) **10 marks**
4. Write pseudocode to print the table of a given number where number is entered by the user, and starting and ending limit should also get from user. (25 minutes) **15 marks**
5. Write a pseudocode to print factorial of a given number. (25 minutes) **15 marks**

6. Write a pseudocode to find whether a number is Palindrome or not. (A Palindrome is the number which is same when read from either side. For Example: 303, 222 ,1001). (35 minutes) **25 marks**

Problem: Draw Flowchart of repetition-based problems.

Repetition Problems

1. Draw flow chart to print first 'n' Even numbers where 'n' is entered by the user. (15 minutes) **10 marks**
2. Draw flow chart to print the table of a given number where number is entered by the user, and starting and ending limit should also get from user. (20 minutes) **15 marks**

Best of Luck
