

CL-2001

Data Structures

Lab # 15

Objectives:

1. Hashing

Note: Carefully read the following instructions (*Each instruction contains a weightage*)

1. There must be a block of comments at start of every question's code by students; the block should contain brief description about functionality of code.
2. Comment on every function about its functionality.
3. Use understandable name of variables.
4. Proper indentation of code is essential.
5. Make separate .cpp files for all tasks and use this format **22F-1234_Task1.cpp**.
6. First think about statement problems and then write/draw your logic on copy.
7. After copy pencil work, code the problem statement on C++ compiler.
8. Make a Microsoft Word file and paste all of your C++ code with all possible screenshots of every **task output in MS word and submit .cpp file with word file**.
9. Please submit your file in this format **22F-1234_L1**.
10. Do not submit your assignment **after the deadline**.
- 11. Do not copy code from any source otherwise you will be penalized with negative marks.**

Problem 1:

Implement following hashing techniques in C++.

- Linear Probing
- Quadratic Probing
- Rehashing
- Double Hashing
- Chaining
- Bucket

The following functions for all the algorithm should be implemented.

- Insert
- Delete
- Search
