## CS 1005 : Discrete Structures

### Assignment 1

Instructor : Ms Mahzaib Younas

### Section C

**Q No 01: Find the negation of the proposition “Vandana’s smartphone has at least 32 GB of memory” and express this in simple English and in expression.**

“It is not the case that Vandana’s smartphone has at least 32 GB of memory.”

**This negation can also be expressed as**

“Vandana’s smartphone does not have at least 32 GB of memory”

**Q No 2: Find the conjunction of the propositions  $p$  and  $q$  ( $p \wedge q$ ), where  $p$  is the proposition “Rebecca’s PC has more than 16 GB free hard disk space” and  $q$  is the proposition “The processor in Rebecca’s PC runs faster than 1 GHz.”**

$p$  is the proposition “Rebecca’s PC has more than 16 GB free hard disk space”

$q$  is the proposition “The processor in Rebecca’s PC runs faster than 1 GHz.”

**“Rebecca’s PC has more than 16 GB free hard disk space, and its processor runs faster than 1 GHz.”**

For this conjunction to be true, both conditions given must be true. It is false when one or both of these conditions are false.

**Q No 03: What is the disjunction of the propositions  $p$  and  $q$ , where  $p$  is the proposition “Rebecca’s PC has more than 16 GB free hard disk space” and  $q$  is the proposition “The processor in Rebecca’s PC runs faster than 1 GHz.”**

The disjunction of  $p$  and  $q$ ,  $p \vee q$ , is the proposition Extra Examples

“Either Rebecca’s PC has at least 16 GB free hard disk space, or the processor in Rebecca’s PC runs faster than 1 GHz.”

**Q No 04: Prove the logarithm Quotient law, if  $b=5$ ,  $x=75$  and  $y=125$  respectively.**

The logarithm Quotient law is

$$\log_b \left( \frac{x}{y} \right) = \log_b x - \log_b y$$

| LHS                                                                                                                                 | RHS                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| $=\log_b \left( \frac{x}{y} \right)$<br>$\log_5 \left( \frac{75}{125} \right)$<br>$\log_5 \left( \frac{3}{5} \right)$<br>$-0.31739$ | $\log_b x - \log_b y$<br>$\log_5 75 - \log_5 125$<br>$2.68261 - 3$<br>$-0.31739$ |

**Q No 05: Describe the rules of addition with appropriate example?**

There are four rules of additions

| Additive Inverse                                                                                                                         | Commutative                                                                               | Associativity                                                                                                                                              | Cancellation rule                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>General eq</b><br>$a + (-a) = 0$<br>let $a = 5$ then its additive inverse will be -5<br>$5 + (-5) = 0$<br>$0 = 0$<br><b>LHS = RHS</b> | $a + b = b + a$<br>let suppose $a=2$ and $b=7$<br>$2+7=7+2$<br>$9 = 9$<br><b>LHS= RHS</b> | $(a + b) + c = a + (b + c)$<br>let suppose $a=2$ , $b=7$ , and $c=10$<br>$(2+7)+10 = 2 + (7+10)$<br>$(9) + 10 = 2 + (17)$<br>$19 = 19$<br><b>LHS = RHS</b> | If $a + b = a + c$ , then $b = c$<br>$a + b = a + c$<br>taking additive inverse of $a$ which is $(-a)$ and add on both sides<br>$a + b + (-a) = a + c + (-a)$<br>$b = c$ |

**Q No 06: Make a truth table for the statement**

1.  $(P \vee Q) \wedge \sim(P \wedge Q)$

| P | Q | $(P \vee Q)$ | $(P \wedge Q)$ | $\sim(P \wedge Q)$ | $(P \vee Q) \wedge \sim(P \wedge Q)$ |
|---|---|--------------|----------------|--------------------|--------------------------------------|
| T | T | T            | T              | F                  | F                                    |
| T | F | T            | F              | T                  | T                                    |
| F | T | T            | F              | T                  | T                                    |
| F | F | F            | F              | T                  | F                                    |
