

Quiz # 4 - Solution

Name: _____

Roll # _____

Content	Clo's	Activity
• Introduction to DDL with all constraints	4	Quiz 4

Write SQL queries for following. (Make sure to follow conventions to write SQL)

Write a query to create a table Employee and use the DROP commands to drop columns and constraints in it:

1. Attributes are

- Employee number
 - Employee name
 - Job
 - Hire date
 - Salary
 - Commission
 - Department number
- Add the primary key constraint to the column Employee number.
 - Apply not null constraint on Salary Column.
 - Apply check constraint on commission, that commission must be great than 2000.
 - S. Apply default constraint on department number as "Computer Science".
 - Create another Table (named as your roll no). Refer this table as Foreign key in Employee Table. Make sure that updating is not allowed in parent table, but parent table can be deleted.
 - Change the column name "salary" to "empsalary".
 - Now delete the table Employee.

Solution:

(1)

```
CREATE TABLE Employee (  
    EmployeeNumber INT,  
    EmployeeName VARCHAR(50),  
    Job VARCHAR(50),  
    HireDate DATE,  
    Salary DECIMAL(10, 2),  
    Commission DECIMAL(10, 2),  
    DepartmentName VARCHAR(50)  
);
```

(2)

```
ALTER TABLE Employee ADD CONSTRAINT PK_Employee PRIMARY KEY (EmployeeNumber);
```

(3)

```
ALTER TABLE Employee ALTER COLUMN Salary DECIMAL(10, 2) NOT NULL;
```

(4)

```
ALTER TABLE Employee ADD CONSTRAINT CHK_Commission CHECK (Commission > 2000);
```

(5)

```
ALTER TABLE Employee ADD CONSTRAINT DF_DepartmentName DEFAULT 'Computer Science'  
FOR DepartmentName;
```

(6)

```
CREATE TABLE YourRollNo (
```

```
    RollNo INT PRIMARY KEY
```

```
);
```

```
ALTER TABLE Employee
```

```
ADD CONSTRAINT FK_Employee_RollNo
```

```
FOREIGN KEY (YourRollNo) REFERENCES YourRollNo(RollNo)
```

```
ON UPDATE NO ACTION
```

```
ON DELETE CASCADE;
```

(7)

```
ALTER TABLE Employee
```

```
RENAME COLUMN Salary TO EmpSalary;
```

(8)

```
DROP TABLE Employee;
```
