Q1: Write SQL Queries

1. Write a SQL query to identify those rows where col1 does not contain the escape character underscore (_). Return col1.

```
SELECT *  
FROM testtable  
WHERE col1 LIKE '%/_%' ESCAPE '/';
```

2. From the orders table, write a SQL query to select orders between 500 and 4000 (begin and end values are included). Exclude orders amount 948.50 and 1983.43. Return ord_no, purch_amt, ord_date, customer_id, and salesman_id.

```
SELECT *  
FROM orders  
WHERE (purch_amt BETWEEN 500 AND 4000) AND NOT purch_amt IN (948.50,  
1983.43);
```

3. From the emp_deatils table, write a SQL query to count the number of employees in each department. Return department code and number of employees.

```
SELECT emp_dept, COUNT(*)  
FROM emp_details  
GROUP BY emp_dept;
```

4. From the emp_deatils table, write a SQL query to find the highest order (purchase) amount by each customer on a particular order date. Filter the result by highest order (purchase) amount above 2000.00. Return customer id, order date and maximum purchase amount.

```
SELECT customer_id, ord_date, MAX(purch_amt)
FROM orders
GROUP BY customer_id, ord_date
HAVING MAX(purch_amt) > 2000.00;
```

5. From the order table, write a SQL query to find the maximum order (purchase) amount based on the combination of each customer and order date. Filter the rows for maximum order (purchase) amount is either 2000, 3000, 5760, 6000. Return customer id, order date and maximum purchase amount.

```
SELECT customer_id, ord_date, MAX(purch_amt)
FROM orders
GROUP BY customer_id, ord_date
HAVING MAX(purch_amt) IN (2000, 3000, 5760, 6000);
```

6. From the order table, write a SQL query to calculate the summation of purchase amount, total commission (15% for all salespeople) by each order date. Sort the result-set on order date. Return order date, summation of purchase amount and commission.

```
SELECT ord_date, SUM(purch_amt), SUM(purch_amt) * 0.15
FROM orders
GROUP BY ord_date
ORDER BY ord_date;
```

7. From the employees table, write a SQL query to find those employees whose first name does not contain the letter 'M'. Sort the result-set in ascending order by department ID. Return full name (first and last name together), hire_date, salary and department_id.

```
SELECT first_name || ' ' || last_name as Full_Name, hire_date,
salary, department_id
FROM employees
WHERE first_name NOT LIKE '%M%'
ORDER BY department_id;
```

8. From the employees table, write a SQL query to find those employees who earn between 8000 and 12000 (Begin and end values are included.) and get some commission. These employees joined before '1987-06-05' and were not included in the department numbers 40, 120 and 70. Return all fields.

```
SELECT *
FROM employees
WHERE salary BETWEEN 8000 AND 12000
AND commission_pct IS NOT NULL
OR department_id NOT IN (40 , 120 , 70)
AND hire_date < '2003-06-05'
```
